

2007 MUNICIPAL PERFORMANCE MEASUREMENTS

Efficiency measures are defined as the ratio of input/output. Input is defined as operating costs and is used as the numerator for all efficiency measures. Output consists of total units and is used as the denominator, i.e.: assessment, tons, etc. when operating costs are divided by total units. The resulting efficiency measure describes the cost per unit. Formulas for all efficiency measures were changed in 2005 to improve the definition of operating costs by including external transfers. Therefore, there are comparisons from 2005 only.

Effectiveness measures provide information about the quality of service delivery. Effectiveness indicators measure outcomes against service goals. Effectiveness measures may consist of counts or ratios. Effectiveness measures are reported with comparative figures since 2003 wherever available.

In making comparisons, the user should be careful to compare similar municipalities. Every municipality faces unique circumstances, which are not revealed in the raw data alone. Municipalities also make choices about the level of service provided. Results should be a starting point for further investigation into the unique circumstances of the municipality and factors, which affect results.

Please note that the method used to allocate expenditures between functions can affect efficiency measure results and has implications for comparability, specifically the Allocation of General Government Expenditures and Inter-functional Transfers.
